

Harness a "McGILL AUTOPOWER" attachment to your Ford Car and it will run any belt-driven farm machine that a 12 h.p. gasoline engine will operate, will do it at less expense, cost about one-tenth as much, and positively will not harm the car in any way.

## An Ideal Combination for Every Farmer

A machine for pleasure, and the same machine for work. Think of the convenience of having a power plant that will run all your machines, and can in three minutes be converted into a pleasure car to take you to town.

The great problem on the farm to-day is to get things done economically, and *when you want them done*. "McGill Autopower" solves this problem. Buy one and save the price of an expensive gasoline engine. Be independent of outside power for cutting ensilage, filling your silo, sawing your wood, grinding your feed, etc.

## Attached or Detached in Three Minutes

After the first installation the attachment can be taken off or put on in three minutes. "Autopower," will satisfactorily operate at required speeds, such machines as Ensilage Cutter, (any make), Corn Husker, Feed Grinder, Corn Sheller, Small Thresher, Buzz Saw, Pumps, (all kinds), Hay Press, Root Pulper, Fanning Mill, Roller Grinder, Concrete Mixer, Road Crusher, Cider Press, Churn, Washing Machine, Milking Machine, etc.

**Greatest Labor Saver for the Farmer yet Developed**  
**Makes your Ford Car pay Dividends**

**PRICE COMPLETE (WITH GOVERNOR) \$80.00 F.O.B. WINNIPEG**

*Dear Sir. Enclosed please find my cheque for \$45 in payment for the wood saw purchased from you.*

*In regards to the autopower attachment purchased from you this fall. would state that under actual test it has proven very satisfactory to me. I must confess that when I purchased it from you I had no idea that it would turn out the class of power that it has demonstrated to me on my Ford car. I have only used it for filling silos and clearing wood as yet. Filling silos we used a 11" International Harvester Co. blower and we kept four teams hauling the corn and then had to wait for corn often, and we always had lots of power. Our silos are 12+28 & 13+28 and I am sure we can fill one in a day if we could keep the supply of corn coming. never had the cutter or blower to choke once!*

*On the wood saw it simply is perfection itself. The governor control the speed so nicely. The man who helped fill our silos state that they never saw such good work done or heard a machine that run so evenly at the one speed. I think you should be able to place a number in this section another year.*

*Yours Truly*

*A. M. McGill Esq.*

*Please find enclosed a picture of my Ford car running a cutting box filling my 12X30 silos with your McGill Attachment. I also cut logs from 2' to 3 ft. through with 2 notches of gas cut 10 cords with 2 gal. of gas. Also run 31 inch buzz saw and Sider press, & a 6 1/2 in. plate Massy Harris grinder, the next will be a cement mixer. I published it in our local paper and I have had lots of inquiries about it. Wishing you every success I remain.*

*Yours truly*  
*Wm Squire*

**W**HEN the man who knows about the right friends, you are right.

**Gilson Manufacturing**

Messrs. Knight Metal

Gentlemen:-

We have been reports from customers to pass on to you.

The custom preferred the McGill Auto Power our 13" silo filler with outstanding case was M. Feris, on whose farm a was held. Mr. Bailey fillers and was so pleased with the Attachment that he got demonstration was going the crowd was there.

We feel sure getting this information

HCM 8

Mr. A.M. McGill.  
Toronto, Ontario.

Dear Sir:-

Well I have heard bought the Autopower I must say with it and think it beats anything or for power on the farm. I have on three notches of gas, and I can grind a bushel

Well I think the Autop well up here as there are have not power enough to grinding

Well I have had lot of see it work and they are more think I can sell a lot of in the going to take my car out the town demonstrate it so that the people me know if you have the conditions

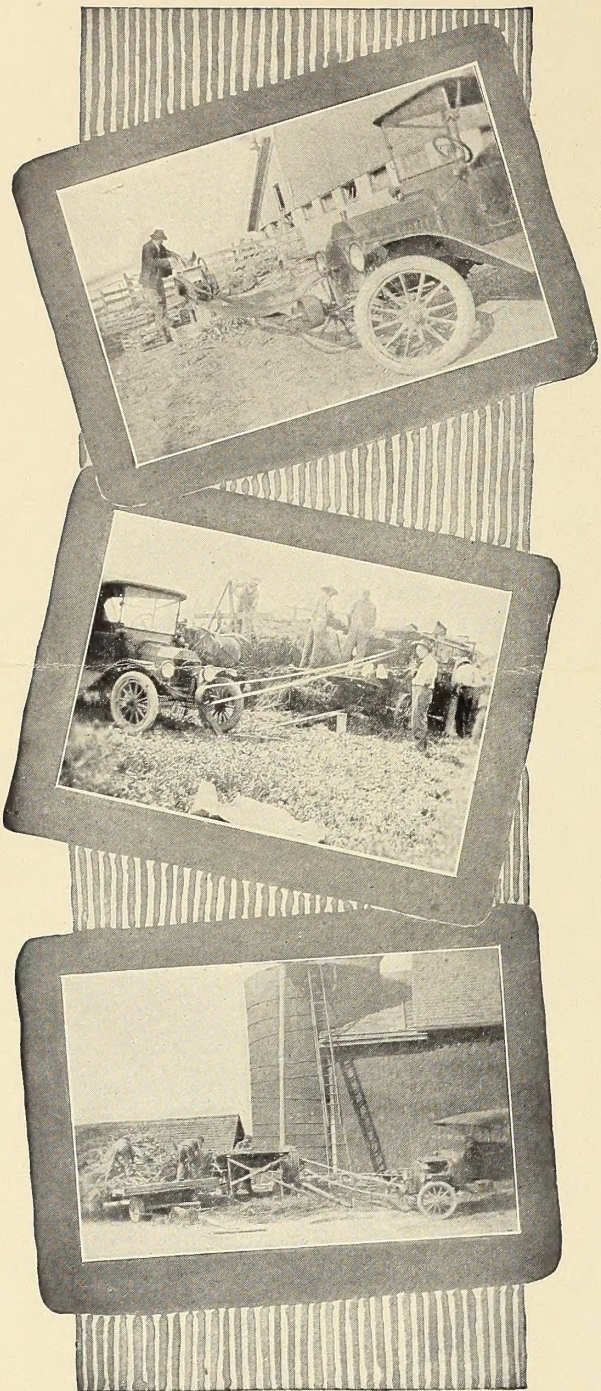

Manufactured

### IT PROVIDES CONSTANT SPEED

**T**HE AUTOMATIC GOVERNOR saves the time of one man at the throttle. By automatically regulating the supply of gas, it takes care of varying loads on the machine, caused by choking or lack of work. Also prevents Stalling or Racing of the motor from similar causes.

**A**N AUXILIARY FAN is an integral part of MCGILL AUTOPOWER. It supplies the necessary current of air through the radiator. Without this Fan the engine would overheat. It is guaranteed to keep the engine cool under all weather conditions.

**T**HE FRICTION CLUTCH permits of cranking the engine before throwing in the load.

# SUPERIORITY Points You'll Appreciate

ment is described in the testimonials below.  
 surprised and enthusiastic owners.

thing is so good that  
 who owns one, goes  
 commending it to his  
 NOW it must be all

St. Catharines Dec. 7, 1918  
 Mr. A. M. McGill  
 Dear sir

Regarding the  
 Autopower Attachment I received from  
 you, I am sorry for not writing  
 sooner, but how easy it is to forget your  
 friends these busy times.  
 you remember you said if I wasn't  
 tickled to death with it not to keep it.  
 Well I was tickled to death, as you say  
 and have just come too again.  
 Not only tickled with the work it did, but  
 with the many surprises it sprung  
 on the neighbors, and those who came to  
 see it work.  
 I can say it is a complete success.  
 We filled 4 silos with a 13 inch Lister  
 box, and can fill a 12' x 35' silo in 8 hours.  
 my own silo is 12 x 40 and it filled it just  
 as easy seemingly, on a little over 1 gal  
 of gas an hour, which is very cheap.  
 considering what it usually costs us,  
 and without over-heating of the car.

Yours truly

Mr. A.M. Mc Gill  
 Toronto, Ont.

Dear Sir:-

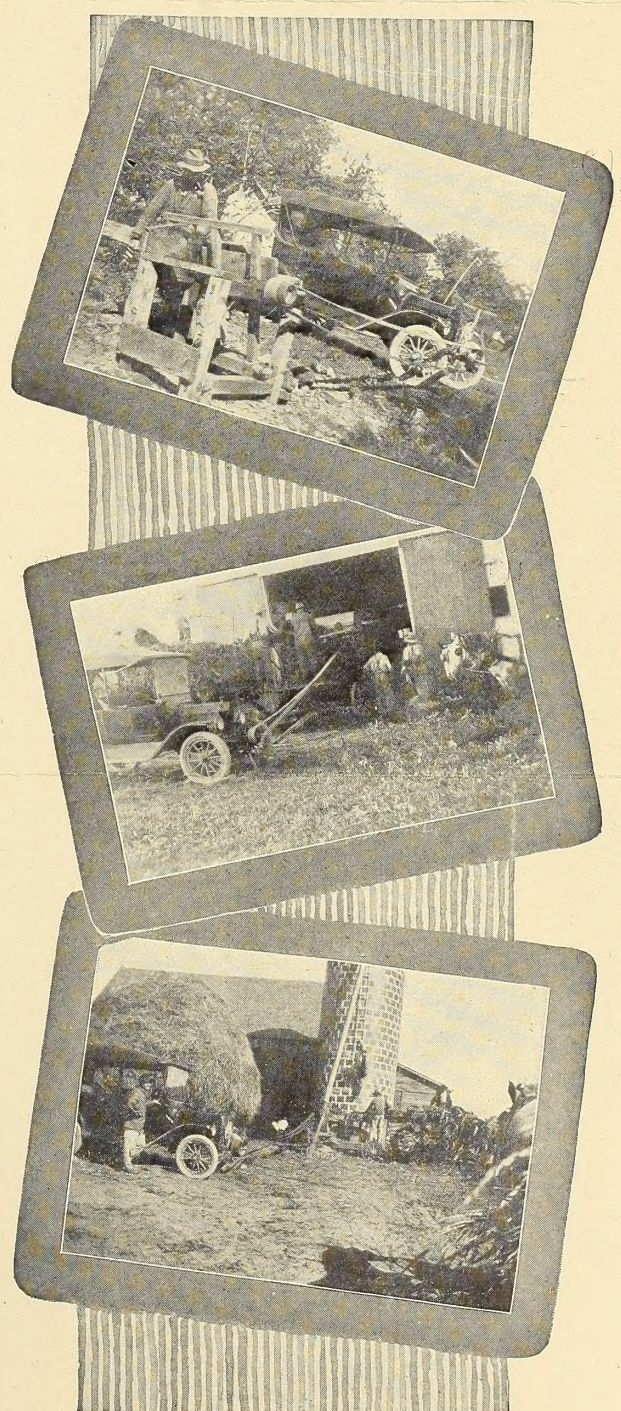

Regarding the Autopower which I purchased from  
 you at the Canadian National Exhibition Toronto, would say  
 that I have done about ten days work with this.  
 I am very well satisfied with this, and have used it  
 on a large sized Thoms Cutting Box with blower, blowing the  
 cuts up 27 ft. high and across a mow. I am doing the same work  
 with it that I had done with a 20 H.P. tractor last year and  
 have no trouble at all. I work a circular saw and am now  
 getting a grain crusher. I farm 500 acres of land and I consider  
 it the best piece of machinery ever put on a farm. If I could  
 not get another of these attachments I would rather sell my  
 motor than dispose of the Autopower.

Yours truly,  
 Albert Kee

**M**cGILL AUTOPOWER is driven DIRECT  
 from Crankshaft of Motor. Your car is NOT  
 JACKED UP at the rear. Only the Engine  
 operates. NO WEAR AND TEAR on Rear Axle,  
 Tires or Transmission.

**C**AR MAY BE RUN ON ROAD WITH  
 AUTOPOWER ATTACHED, without injury  
 to car. You can finish one job, and be A MILE  
 AWAY, set up for the next in TEN MINUTES,  
 carrying your help with you.

**S**TATIONARY PLATE left on car when attach-  
 ment is removed does not mar its appearance,  
 being also designed as a license plate holder.

heard from you since I  
 say that I am more than pleased  
 anything I ever saw for handiness  
 gave me all the power I want  
 tied it on four notches of gas  
 minute and no work on the engine.  
 Autopowers are going to take  
 lot of small engines that  
 finding.  
 lot of different people to  
 more than pleased with it. I  
 in the spring, and I am  
 towns around here and  
 people can see how it works. Let  
 for other cars.

Yours very truly,

# Let Your Ford Operate Your Farm Machines

It has plenty of power to run any belt-driven machine requiring up to 12 h.p.  
Guaranteed not to overheat in 90° weather

**Y**OU know the power of a Ford. Every time you climb a hill—pass a big car on a sandy road—watch a Ford truck walk away with a heavy load—you marvel at the power of the little Ford engine.

With a "McGILL AUTOPOWER" attached to your Ford, you have the Best and Most Economical Power Plant obtainable.

The "McGILL AUTOPOWER" makes it possible to buy the best 12 h.p. Portable Gasoline Engine in the world with an AUTOMOBILE THROWN IN for less money than the price of an ordinary gasoline engine of equal power.

## IT HAS THE POWER

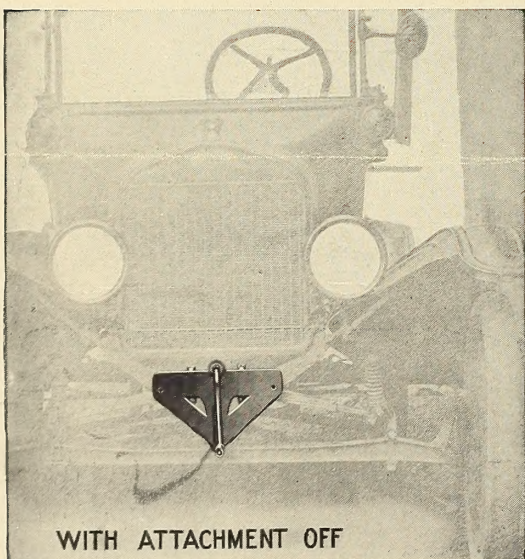

**P**OWER is taken direct from the crankshaft of the motor—hence there is no loss of power and no wear and tear on the car.

The new "AUTOMATIC GOVERNOR" operating on the carburetor, automatically regulates the fuel supply, providing Constant Speed, and eliminating any strain on the motor from varying loads.

A FRICTION CLUTCH permits of the motor being cranked before throwing in the load.

The AUXILIARY FAN Keeps the engine cool under all weather conditions.

## BUILT ON RIGHT PRINCIPLE

**T**HE various parts of "McGILL AUTOPOWER" are made of the very best materials obtainable. The attachment is fully guaranteed against material or mechanical defects.

Drive Pulley is 10" in diameter, with 5¼" crowned face.

Speed of the engine is about the same as running on the road at from 15 to 30 miles per hour, according to the load.

Shipping weight about 100 lbs.

## IT IS STRONG AND DURABLE

McGILL AUTO-POWER "COSTS" ACTUALLY NOTHING, since it will pay for itself in one Fall's work.

## Fully Guaranteed

We GUARANTEE the "McGILL AUTO-POWER" attachment to be free from mechanical or material defects for ONE YEAR.
